

THREE STEPS TO COST-EFFECTIVE WILDFIRE HOME PROTECTION

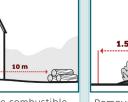

Complete these 3 steps to reduce the risk of a wildfire spreading to your home. For items listed under step 3 check with your municipality about any permit requirements and the availability of subsidies. Give decks, sheds and outbuildings within 10 m of your home the same FireSmart consideration as you do your home.

STEP 1: MAINTAIN WHAT YOU'VE GOT AT LEAST TWICE PER YEAR

Remove needles, leaves R and other debris from r gutters, roof surfaces, decks and balconies. Regularly clean vents.

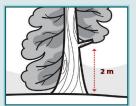

Remove combustible materials (firewood and lumber) stored within 10 m of the house perimeter and under decks.

Remove all combustible ground cover (mulch and plants) within a 1.5 m of the house perimeter.

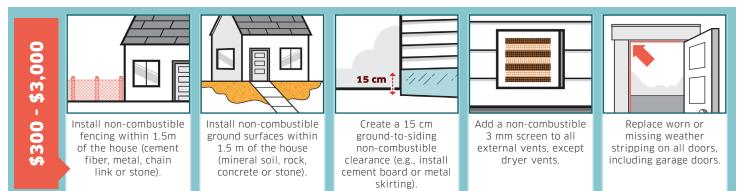

Mow the lawn to <10 cm and plant low-growing, wellspaced shrubs and other vegetation.

Prune trees to create a 2 m clearance from the ground to the lowest tree branches.

STEP 2: COMPLETE SIMPLE UPGRADES

STEP 3: COMPLETE MORE COMPLEX UPGRADES

| - \$30,000 | | | | | |
|------------|---|---|--|---|--|
| \$3,000 | Install Class A fire-resistant roof covering (e.g., cement fibre, metal or asphalt shingles). | Install non-combustible siding (stucco, metal, stone, cement fibre board). | Install multi-pane or tempered glass windows and exterior fire rated doors. | Remove conifer trees that are within 10 m of the house. | Retrofit all deck components to be fire-rated, with a continuous surface. |

NOTE: Not all actions will be applicable to each home. Completing these steps does not guarantee the prevention of fire. • Cost estimates are based on a 2,500 sq ft home.
